This application is for a magnetic head.

“... the barrier layer including a first region and a second region around the first region, and a thickness of the barrier layer in the second region being greater than a thickness of the barrier layer in the first region, both of the first and second regions being on the free layer in a layer stacking direction...”

These features, in combination with the other features of Claim 1 are not anticipated by, nor made obvious over, the prior art of record.

- **Claim 7** specifies a magnetic head, which requires:

*“... wherein and end portion of the free layer **extends and projects** from the ferromagnetic tunnel junction element **toward one of the shield layers in a direction different from the first direction**, the end portion of the free layer **connecting** to the one of the shield layers.”*
